5 SaaS Apps on Google Play | SAR/YamamCM Hajj System | 99.99% Crash-Free | ~90% Fewer ANRs | ~50% Faster Cold Start

PROFESSIONAL SUMMARY

Senior Android Engineer with 5+ years of experience apps to Google Play, from 5 SaaS e-commerce and food-ordering apps to the SAR/YamamaCM built for the Saudi Ministry of Transport during Hajj Season 25/26. Builds fast, stable apps on Clean Architecture and Hilt, with 99.99% crash-free sessions and ~90% fewer ANRs in production. Integrates REST APIs and payment SDKs, and ships every release alongside backend, product, UI/UX, and QA teams across Saudi Arabia, Egypt, and India. Looking for an Android Engineer role where reliable engineering and a polished user experience drive the product.

TECHNICAL SKILLS

Languages and Fundamentals: Kotlin, Java, Python, SQL

Android Core: Android SDK, Jetpack Compose, XML Layouts, Fragments, Intents, Lifecycle Management, Navigation Component, Services, Broadcast Receivers, Material Design 3

Architecture and Design: Clean Architecture, MVVM, MVI, SOLID Principles, Modularization (Feature & Core Modules), Hilt (Dependency Injection)

Asynchronous Programming: Kotlin Coroutines, Flow, StateFlow, LiveData, WorkManager

Local Storage and Offline: Room, DataStore, Offline-First Synchronization

Networking and APIs: REST APIs, Retrofit 2, OkHttp 3, OAuth 2.0, JSON Serialization

Payments SDKs: Checkout.com Flow Payment SDK, Tap Payments SDK

Firebase and Monitoring: Firebase Cloud Messaging (FCM), Firebase Crashlytics, Firebase Analytics

Testing and Quality: JUnit, MockK, Espresso, Unit Testing

Performance and Build Tools: Android Studio, Gradle, Android Profiler, R8 / ProGuard

Version Control and Release: Git, GitLab, Google Play Deployment

PROFESSIONAL EXPERIENCE

Senior Android Engineer — Apr 2025 – Present

Wulooj | Riyadh, Saudi Arabia (Remote)

- Delivered 5 SaaS e-commerce, food and beverage (F&B), and B2C apps to Google Play, from concept to launch, using Clean Architecture, Hilt dependency injection, and a modular codebase that keeps releases fast and maintainable.
- Architected SAR/YamamaCM, a Saudi Government (Ministry of Transport) app for Hajj 2025 and 2026 where admins take candidate attendance across duty stations and sessions, manage temporary leave and extensions, and candidates view their duty assignments and confirm meals; built offline-first with Room so attendance recorded without internet syncs automatically to the server once connectivity returns.
- Built the customer experience across the apps: multi-branch browsing, categories and items, cart, multi-step checkout, order history and details, and real-time order tracking.
- Integrated secure payments with Checkout.com flows and Tap Payments SDKs, using tokenized session validation and explicit transaction-failure handling.
- Developed loyalty and wallet features: rewards and redemption, wallet balance, sending credit, gift cards, and booking flows.
- Translated business requirements into shipped features by working with backend, product, UI/UX, and QA teams across Saudi Arabia, Egypt, and India, aligning API contracts, implementation, and testing in every release.

Android Engineer — Mar 2024 – Mar 2025

Funsol Technologies Pvt Ltd | Rawalpindi

- Reached 99.99% crash-free sessions across production releases by refactoring legacy code and modularizing core layers with SOLID principles and Hilt.
- Cut ANRs (Application Not Responding) by ~90% on complex screens by moving blocking work off the main thread with Kotlin Coroutines and StateFlow.
- Implemented background data synchronization and scheduled tasks with WorkManager and Kotlin Coroutines, keeping app data up to date reliably while minimizing unnecessary resource usage.
- Set the team's architecture standard by building native apps with Kotlin, Jetpack Compose, MVVM, and Clean Architecture.

Android Developer **Sep 2023 – Mar 2024**

Join App Studio| Rawalpindi

- Reduced battery drain by ~40% during extended navigation in GPS and maps apps built with Kotlin, Mapbox SDK, and Google Maps API, by optimizing background location polling and map-layer memory management.
- Built an all-in-one utility toolbox with 50+ tools in a single app under 15 MB, including anti-theft protection features such as intruder selfie capture and security alarms, using sensor listeners and Camera Manager.

Android Developer **Mar 2022 – Sep 2023**

Share Hands | Rawalpindi

- Cut cold-start time by ~50% and improved image caching by profiling with Android Profiler and optimizing startup and memory usage.
- Reduced regression bugs by writing JUnit and MockK test suites with QA to raise coverage of core domain logic.
- Launched a portfolio of consumer apps on Google Play with a consistent Material Design UI across screen sizes and Android versions, using XML layouts, Fragments, and Jetpack components.

Android Developer **Feb 2021 – Mar 2022**

Exceed IT Solutions | Peshawar

- Built a real-time camera translator by combining CameraX, OCR (Optical Character Recognition), and translation APIs to extract and translate text from live video.
- Engineered a custom Android keyboard (Input Method Editor, IME) with low-latency touch handling, efficient layout rendering, and text insertion APIs.
- Enabled offline use and monitoring in Java and Kotlin apps with Room/SQLite persistence, Firebase Cloud Messaging push notifications, and Crashlytics crash reporting.

PROJECTS

SAR / YamamaCM – Hajj Crowd Management App for the Saudi Ministry of Transport | *Wulooj*

Tech: Kotlin, Clean Architecture, MVVM, Jetpack Components, Retrofit, Room, WorkManager, Firebase FCM, Map Services

- Designed an offline-first architecture: records created without internet are stored locally in Room and sync automatically through background workers when the connection returns, so no data is re-entered or lost.
- Built the duty and role management side: candidates see their assigned station, duty location, and reporting admin and confirm breakfast, lunch, and dinner meals in the app, while admins mark temporary leave and extend it when needed.

E-Commerce, Food Ordering and Wallet Suite – 5 SaaS Apps (F&B and B2C) | *Wulooj*

Tech: Kotlin, Jetpack Components, Clean Architecture, MVVM, Hilt, Retrofit, Checkout.com, Tap Payments SDK

- Delivered 5 apps with multi-branch browsing, categories and items, cart, multi-step checkout, order history and details, live order tracking, and custom UI animations.
- Secured payments with Checkout.com flows and Tap Payments SDKs, tokenized session validation, and explicit error handling for failed transactions.
- Added loyalty and wallet features: rewards and redemption, wallet, send credit, gift cards, and booking.

Audio Books App | *Funsol Technologies*

Tech: Kotlin, Clean Architecture, MVVM, Jetpack Components

- Built the core listening experience: users download audiobooks to listen offline, stream them online, and mark favourites to find them again quickly.

Edge Lighting App| *Funsol Technologies*

Tech: Kotlin, Jetpack Components, Clean Architecture , Coroutines, Flow, WorkManager

- Built an edge lighting designer that displays colored lighting around the phone screen, with edges created in 1, 2, 3, or multiple color shades.
- Let users personalize their design with different shapes and emojis and create edge-to-edge views based on their mobile screen.

All-in-One Utility Toolbox | *Join App Studio*

Tech: Kotlin, Android Sensors SDK, Camera Manager, DataStore, Room

- Packed 50+ tools into one app under 15 MB, including anti-theft features such as sensor-triggered intruder selfie capture and security alarms.

EDUCATION

Master of Computer Science, National University of Sciences & Technology (NUST), Rawalpindi **Sep 2024 – Present**

Bachelor of Software Engineering, Abasyn University, Peshawar **Sep 2018 – Dec 2022**
